Naledi Sithole

Software Developer
naledi.sithole@example.co.za | +27 83 555 0192 | 47 Church Street, Pretoria, Gauteng
ID Number: 8001015009087

Profile

Software developer with six years building and running payment and reporting systems for South African banks and insurers. Comfortable owning a service from the first commit through to production support. Known for reducing batch processing times and for writing the runbooks nobody else wanted to write.

Work Experience

Senior Software Developer
Nedbank Group, Sandton, Gauteng | March 2023 - Present

- Rebuilt the daily reconciliation batch in Java and Spring Boot, cutting a four-hour run to twenty-six minutes and removing the overnight standby rota.
- Introduced structured logging and Prometheus metrics across eleven services, so the team could answer "is it us" without opening a database.
- Led a team of five engineers through the migration of three services from on-premise VMs to containers on AWS, with zero customer-visible downtime.
- Mentored three graduate developers through their first production release.
- Presented quarterly service reports to the executive committee.
- Managed a tooling and licensing budget of R1.2 million.

Tech Stack: Java, Spring Boot, PostgreSQL, Docker, AWS, Prometheus, Git

Software Developer
Dimension Data, Midrand, Gauteng | January 2021 - February 2023

- Built and maintained REST APIs serving the customer portal, handling roughly 40 000 requests a day.
- Replaced a nightly CSV export with an event-driven feed, removing a class of support ticket entirely.
- Wrote the deployment pipeline the team still uses, covering build, test, and staged release.
- Liaised with clients across three departments to agree release windows.
- Worked in two-week sprints with retrospectives, as the team scrum lead.

Tech Stack: Java, Python, PostgreSQL, Jenkins, Linux, Git

Graduate Software Developer
BBD Software, Johannesburg, Gauteng | February 2019 - December 2020

- Worked on a claims processing system for a short-term insurer, mostly backend validation rules.
- Took over the regression suite when it was failing daily and got it back to green.

Education

BSc Computer Science (2018)
University of Pretoria - Hatfield, Pretoria

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Database Systems, Computer Networks, Software Engineering

National Senior Certificate (2014)
Pretoria High School for Girls - Pretoria

Skills & Tools

Technical Skills:

- Back-End / APIs: Java, Spring Boot, Python, RESTful APIs, PostgreSQL, MySQL
- Front-End: React, TypeScript, HTML5, CSS3, Tailwind
- DevOps / Deployment: Docker, AWS (EC2, S3, RDS, Lambda), Linux, Git, CI/CD, Jenkins
- Monitoring: Prometheus, Grafana, structured logging
- Other Tools: IntelliJ IDEA, VS Code, Postman, Figma

Soft Skills:

- Writing documentation other people actually read
- Mentoring and code review
- Incident handling and postmortems

Projects & Community

Open source: pgqueue

- Maintainer of a small PostgreSQL-backed job queue used by three South African startups.
- GitHub: https://github.com/pgqueue-dev/pgqueue

SAICSIT 2022 - Speaker

- Talk on keeping batch systems observable, delivered to roughly 120 attendees.

CodeBridge Mentorship - Volunteer

- Weekend mentoring for first-year computer science students, 2021 to present.

Certifications

AWS Certified Solutions Architect, Associate (2023)

Oracle Certified Professional, Java SE 11 Developer (2021)
